DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-17, 19,20, 33-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Browning et al (U.S. Patent 6415,388).

Browning discloses a method, apparatus of an integrated circuit (IC), a microprocessor having a temperature sensor providing measurement of the IC, a programmable storage location store temperature limits via an instruction executed by the IC and compare logic coupled to the temperature sensor to compare temperature, terminals on the processor to supply an indication of

Art Unit: 2863

results the comparison (col. 1-2, lines 65-29, Abstract, fig. 4-7), multiple temperature limit comparison, control location with programmable operation, addressable operation (fig. 3, unit 110), output external to the IC (fig. 4), second storage location and temperature limit (fig. 2), third temperature limit (fig. 6), limit value comparison (fig. 7).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

a. Claims 18 and 21 rejected under 35 U.S.C. 103(a) as being unpatentable over Browning et al (U.S. Patent 6,415,388) in view of Hussain et al. (U.S. Patent 6,172,611).

Browning discloses a method including the subject matter discussed above except active cooling using a fan.

Hussain discloses such application to lower temperature quicker as it is well known in the art (col. 5, lines 59-65).

Art Unit: 2863

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Browning to have the use of active cooling taught by Hussain in order to lower temperature quicker.
